Water-Based Nano Silica Dispersion is a liquid that evenly disperses nano-sized silica particles in water, with good dispersibility and high solid content. Aqueous nano-silica dispersion is prepared by special dispersion processes and equipment. The main components include silica particles, water, and possible dispersants and stabilizers. These ingredients work together to ensure the stable dispersion of silica particles in water and prevent agglomeration and sedimentation. It is usually a transparent or translucent colloidal solution, odorless, non-toxic, low viscosity, easy to penetrate and mix.
