Water-based primers are paint products used as the basecoat for a surface to be painted. Unlike their solvent-based counterparts, water-based primers contain little to no volatile organic compounds (VOCs) and are less harmful to the environment and to human health. Water-based primers are made by combining acrylic resins, pigments, and water with other additives that provide specific performance properties, such as adhesion to a variety of surfaces, corrosion resistance, or faster drying times. They can be applied with brushes, rollers, or spray guns and are suitable for use on a variety of surfaces, including wood, metal, concrete, and masonry. Overall, the use of water-based primers has become increasingly popular due to their effectiveness and eco-

friendliness. With more and more professionals and consumers seeking sustainable and safe products, water-based primers are likely to continue growing in popularity in the painting and coatings industry.
