Abstracts

The global Water-based PVF Spray Coatings market size is predicted to grow from US$ 150 million in 2025 to US$ 216 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Water-based PVF spray coatings are advanced waterborne coatings that use polyvinylidene fluoride as the primary film-forming material, with water as the dispersion medium, eliminating the need for organic solvents. They provide excellent weather resistance, chemical durability, abrasion resistance, and color retention. Applied by spraying, they form dense protective films on metal, concrete, and composite substrates, widely used in building fa?ades, roofing panels, transportation vehicles, and chemical equipment protection. With stricter environmental regulations and the rise of green construction materials, demand for these coatings is steadily increasing in sustainable and high-performance markets. In 2024 the production volume was 11,917 tons and the average price was $12,000 per ton.

Powder coatings lack solvents, giving way to negligible volatile organic compound (VOC) emission into the atmosphere and reducing the risk of combustion during their usage and storage process. In addition, the powder can be easily washed when exposed to human skin, which reduces the risk of health problems for operators. ETFE is excellent in processability and able to form a thick and non-stick film layer with electrical, mechanical and chemical strength. FEP and PFA Coating Powder are low in melt viscosity and excellent in melt fluidity which can give a coating free of pinholes.
