Water-based semi-permanent mold release agents are substances used in the manufacturing process to prevent materials from sticking to the surface of molds. These agents are formulated with water as the primary carrier, making them environmentally friendly and easy to clean up. They provide a semi-permanent barrier between the mold and the material being molded, allowing for multiple releases without the need for frequent reapplication. This type of mold release agent is commonly used in industries such as automotive, aerospace, and construction to improve production efficiency and reduce the risk of damage to molds and finished products.
