The global Water-Based Textile Printing Paste market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Water-based printing paste is a general term referring to universal white paste, universal transparent paste, functional printing paste, digital paste, etc. Typically, these can be mixed with pigments to form a print-ready paste. Through screen printing, this paste is applied to the surface of fabrics, and after baking and drying, a thin film encapsulating the pigment forms on the fibers, achieving the effect of printed coloration. In the textile and apparel printing process, water-based inks used for textile and apparel printing are commonly referred to as "paste."

Water-based printing paste is prepared by mixing water-based resin fixatives such as polyacrylate emulsion, polyurethane emulsion, and vinyl acetate emulsion with powders or additives to form a paste-like substance. It is primarily used in textile and apparel printing, as well as in shoe material printing and other fields.
