The global Water Bath market size is predicted to grow from US\$ 1686 million in 2025 to US\$ 2294 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Water baths are laboratory equipment that are used to incubate or maintain samples at a constant temperature over long periods of time. They consist of a metal container that is filled with heated water. For temperature regulation, these water baths either have an analog interface or a digital one. One major drawback of water baths is that they can only be used for samples that require temperatures up to 99.9°C, as water starts to boil beyond 100°C. For applications that call for temperatures above 100°C, alternative equipment such as oil baths, sand baths, or silicone baths are used.

According to the report, the growth of the global water bath market has been attributed to the expansion and increase in the number of research and testing facilities worldwide. Steady growth of the primary end-user industries for water baths will also help the market to grow over the forecast period.
