Water Blocking and Absorbing Yarn is a specialized type of yarn used primarily in telecommunications and power cables to prevent water ingress and protect the integrity of the cables. This yarn is typically made from superabsorbent polymer fibers that can swell and gel upon contact with water, effectively blocking any further water penetration. Its primary function is to enhance the longevity and reliability of cables by preventing water-induced damage and corrosion. Additionally, the yarn's ability to absorb and retain large amounts of water makes it an effective barrier in a variety of applications where moisture control is critical.
