The global Water-cooled Laser Chillers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Water-cooled laser chillers utilize cooling towers or other water-cooling systems to dissipate heat. These chillers offer high cooling efficiency and are not affected by ambient temperature, making them ideal for large-scale laser equipment and applications requiring precise temperature control. Although water-cooled chillers necessitate the installation and maintenance of cooling towers and water circulation systems, their superior cooling performance makes them particularly advantageous in high-power laser processing and high-precision temperature regulation fields.

United States market for Water-cooled Laser Chillers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
