The global Water Cooled Linear Motor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Water cooled linear motor is a special type of linear motor that uses a water cooling system to reduce the temperature of the motor, ensuring its long-term stable operation. Its working principle is similar to that of a regular linear motor, both of which are based on the action of magnetic field force to achieve linear motion. However, unlike ordinary linear motors, water-cooled linear motors are equipped with a water cooling system inside or outside the motor, which takes away the heat generated by the motor through circulating water, thereby reducing the temperature of the motor.
