The Water-cooled Magnetic Levitation Chiller (WMLC) is an oil-free centrifugal refrigeration system centered on magnetic levitation bearing technology and featuring a water-cooled condenser. Its core functional units consist of a magnetic levitation compressor, water-cooled condenser, evaporator, and intelligent control system, where the compressor rotor operates in non-contact suspension via active magnetic levitation bearings, eliminating mechanical friction losses and enhancing energy efficiency. The refrigerant completes heat absorption during evaporation and heat rejection during condensation in a closed loop, with the water-cooled condenser dissipating system waste heat through cooling water, while variable-frequency drive technology enables dynamic adjustment of cooling capacity.
