The global Water-ground Source Heat Pump Units market size is predicted to grow from US\$ 10840 million in 2025 to US\$ 20290 million in 2032; it is expected to grow at a CAGR of 9.5% from 2026 to 2032.

Water-ground source heat pump unit is an energy-efficient HVAC (heating, ventilation and air conditioning) device that uses the stable temperature in the ground or water source to provide heating and cooling for buildings. The unit exchanges heat energy with nature through a heat exchanger connected to an underground pipe (ground source) or a nearby body of water (water source). In winter, the heat pump extracts heat from the ground or water and transfers it to the building; in summer, it operates in reverse, transferring heat from the building to the ground or water. Water-ground source heat pump units also have the advantages of long life and low maintenance requirements, and are suitable for residential, commercial and industrial buildings.
