Water indicating labels change color when exposed to water. These labels change color within seconds of water contact, and the color change remains for an extended period even after submersion in water. Water indicating labels are primarily used for verifying water damage during transit and validating customer warranty claims. These self-adhesive labels can be printed using thermal, flexographic or screen printing processes. Water indicating labels are long lasting and possess exceptional resistance from oxidizers. Moreover, the water indicating labels can be equipped with security features to ensure better control and authenticity.
