The global Water and Methanol Injection Systems market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Water/Methanol injection on a gasoline engine is a means of introducing an atomized mixture of water and methanol fuel into your car’s intake (or cold charge pipe) as a means of reducing air inlet temperatures, and increasing octane to suppress this nasty little thing called “detonation” or “knock.”

Water and methanol injection systems are used in automotive and industrial applications to enhance engine performance and control emissions. These systems provide advantages such as reduced intake air temperatures, increased combustion efficiency, and reduced emissions of nitrogen oxides (NOx). As regulations on emissions become stricter and the demand for improved engine efficiency rises, there is a growing demand for water and methanol injection systems. The adoption of alternative fuels, including ethanol and biodiesel, is driving the need for water and methanol injection systems to optimize combustion and ensure proper fuel atomization. These injection systems can improve the performance and reliability of engines running on alternative fuels, enhancing fuel efficiency and reducing emissions. Additionally, the use of water and methanol injection systems in alternative engine technologies, such as direct-injection gasoline engines and turbocharged diesel engines, is growing. The water and methanol injection system market is witnessing trends such as increasing demand for engine performance and emission control, adoption of alternative fuels and engine technologies, integration of advanced control and monitoring capabilities, focus
