The global Water Pressure Tank market size is predicted to grow from US\$ 957 million in 2025 to US\$ 1478 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

It stores water and provides water under pressure when the pump is not running. It builds up a reserve supply of water so the pump starts and stops less often, prolonging the life of the pump. In addition, it provides a reserve supply of water for use during times of high demand.

Secondary water supply equipment is a kind of equipment to solve the problem of residents' water consumption, which is developed by operators in the water supply industry through field surveys, tests and research and development. Secondary water supply equipment is based on the national municipal pipe network or residents' own water supply equipment to realize secondary water supply to meet the water needs of the majority of users. According to the working principle, the secondary water supply equipment can be mainly divided into liquid level, pressure and frequency conversion type three. With the rapid development of the economy, the urbanization process continues to promote the development of the water supply industry. According to our research, the global secondary water supply equipment market in 2022 will be about \$23 billion.
