Water quality COD online analyzer is a device specially used for real-time monitoring of chemical oxygen demand (COD) in water. COD, or chemical oxygen demand, refers to the amount of oxygen consumed by the oxidation and decomposition of reducing substances (such as organic matter, nitrite, ferrous salt, sulfide, etc.) in water using chemical oxidants (such as potassium dichromate). Since organic matter is the most common reducing substance in water, COD reflects the degree of organic pollution in water to a certain extent. The higher the COD, the more serious the water pollution.
