The global Water-Soluble Anti-Caking Agent market size is predicted to grow from US\$ 800 million in 2025 to US\$ 1228 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

A water soluble anti-caking agent is a chemical additive used to prevent substances from forming clumps or lumps in water. In various fields of industry and life, many substances will agglomerate when dissolved in water due to various factors (such as pH value, temperature, ion content, etc.), which will affect fluidity, reaction rate and product stability. The role of the water-soluble anti-caking agent is to prevent its agglomeration by changing the intermolecular interaction of the substance, and maintain its stability and uniform dispersion state. With the increasing awareness of environmental protection, water-soluble anti-caking agents may pay more attention to sustainability in the future, using environmentally friendly raw materials and production processes to reduce the impact on the environment.
