A Water Soluble Nitrogenous Fertilizer is a type of fertilizer that contains nitrogen in a form that is readily soluble in water, making it easy to apply through irrigation systems or as a liquid feed. These fertilizers are typically used to provide crops with essential nitrogen, a key nutrient for plant growth, especially for promoting vegetative development such as leaf and stem growth.

Water-soluble nitrogenous fertilizers dissolve completely in water, allowing the nitrogen to be immediately available to plants. They are commonly used in fertigation systems, where nutrients are applied directly to the plant roots via irrigation water.
