Water-soluble VCI Powder is a fine, dispersible substance engineered to dissolve readily in water, releasing volatile corrosion inhibitors that form a protective layer on metal surfaces upon contact. The water-soluble characteristic of this powder allows for an efficient and controlled dispersion within aqueous systems, ensuring that the corrosion inhibitors are evenly distributed to all exposed metal parts. Its primary intent is to safeguard metals from corrosion without the need for direct application, as the powder's solubility facilitates the formation of a protective atmosphere that envelops the metal, thereby preventing the electrochemical processes that lead to corrosion. This powder not only offers the convenience of a dry, easy-to-handle format but also ensures the integrity of the metal surfaces over time, reducing maintenance costs and extending the lifespan of the materials.
