According to our LPI (LP Information) latest study, the global Water Treatment for Aquaculture market size was valued at US\$ million in 2023. With growing demand in downstream market, the Water Treatment for Aquaculture is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Water Treatment for Aquaculture market. Water Treatment for Aquaculture are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Water Treatment for Aquaculture. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Water Treatment for Aquaculture market.

Rising feed costs will drive advances as fishmeal and fish oil prices continue to grow rapidly, and the ongoing transition from extensive and semi-extensive to intensive aquaculture production supports greater feed demand. However, higher fish product prices -- due in large part to increasing feed costs -- will result in slower growth in global per capita fish consumption, and bring advances in world aquaculture demand to more sustainable levels. The corresponding moderation in world aquaculture output will be particularly significant in China, which is forecast to grow at a slower pace than not only the rest of the Asia/Pacific region, but also South America and the Africa/Mideast region.

According to data from the Food and Agriculture Organization of the United Nations (FAO), the global aquatic product farming volume has shown an increasing trend from 1959 to 2021. According to preliminary statistics, the global aquatic product farming volume in 2021 was about 128 million tons. The State of World Fisheries and Aquaculture 2022 shows that total global aquaculture initial sales in 2020 was approximately US\$265 billion, with farm sales estimated to total US\$281.5 billion. Of the total aquaculture production, 87.5 million tons were produced of aquatic animals, mainly for human consumption; 35.1 million tons of algae, including food and non-food uses; 700 tons of shellfish and decorative pearls. Asian countries account for 70% of the global aquatic animal production in fisheries and aquaculture, followed by the Americas, Europe, Africa and Oceania.
