Waterjet Cutting High-Pressure Pump is a type of high-pressure pump used for waterjet cutting. It works by increasing the water pressure to an extremely high level and then forcing the water through a small orifice to produce a high-speed stream of water that is used to cut materials.

These high-pressure pumps typically use plunger pumps or piston pumps and can generate water pressures of up to 60,000 pounds per square inch (psi). This high-pressure stream of water is capable of cutting almost any material, including metals, stone, concrete, and composite materials.
