Many mobile phone manufacturers have launched waterproof phones. These phones are often dustproof and water-resistant, making them more capable of handling a variety of environmental conditions, such as rain, humid conditions, or accidental flooding. However, please note that while phones may have a waterproof design, it does not mean they can be used underwater for extended periods of time, and not all phones have the same waterproof rating.

The waterproof performance of mobile phones is usually represented by the IP (Ingress Protection) rating of the International Electrotechnical Commission (IEC). For example, IP67 means that the phone can be submerged in water to a depth of up to 1 meter for 30 minutes under certain conditions, while IP68 means higher waterproof performance.
