A waterproof screw has a waterproof shield ring attached to the seating surface (behind the head of the screw) to block water leakage.

Since there is a small gap between the screw's seating surface and the object to be fastened, it is an easy entry path for water and organic solvents. The shield ring of a waterproof screw is highly water-resistant and airtight, and can close the gap between the seating surface and the object to be fastened. This is why they are used to protect electronic circuit boards in home appliances from water splashes and to prevent rainwater from penetrating machinery used outdoors.

The global Waterproof Screw market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
