The global Waterway Automatic Exhaust Valve market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Waterway Automatic Exhaust Valve is an automatic valve for exhausting air and gas. It is usually installed at the high point of the water pipe system or at the suction port of the water pump to ensure that the air and gas inside the water pipe system can be automatically discharged, so as to avoid the air and gas in the pipe from interfering with or hindering the water flow. The Waterway Automatic Exhaust Valve usually consists of a movable ball or valve that is pushed open when water flows through and air and gas are expelled. When the water flow stops, the ball or valve will automatically close, preventing the water from flowing back into the pipe.

In terms of region, Asia Pacific will be the largest growth market due to increasing demand for water treatment and water supply equipment due to population growth and accelerated industrialization in Asia Pacific. In addition, with the promotion of global environmental protection policies, energy saving and emission reduction will become an important development direction of water treatment equipment in the future. Therefore, the energy saving, environmental protection and high efficiency of waterway valves will become an important competitive advantage in the market.
