Waterway transportation is one of the most important modes of transport for trading between the countries. Growth in security concerns of the shipments and lack of proper infrastructure for real-time tracking of the sea consignments lead to the development of the waterway transportation solution market.

The free trade agreements between the countries, growth in popularity of the containerization, and the need for real-time tracking of the shipments drive the market growth. However, factors such as high cost and high reluctance of the small players to adopt the waterway transportation solutions hinder the market growth. Moreover, growth in need for technologically advanced maritime solutions to easily track the movement of the ships provide the lucrative growth opportunities to the market.
