A waveguide is an electromagnetic feed line used in microwave communications, broadcasting, and radar installations. A waveguide connector consists of a rectangular or cylindrical metal tube, which is essentially the same as a pipe flange that connects the source of high-power radio frequency (RF) signals to the directional antenna or transmitter directly or through a waveguide tube. These waveguide connectors are paired in between the flanges; they are usually connected through four or more bolts. Waveguide connectors are also used in horn antennas and dish antennas.

According to the report, one driver in the market is miniaturization of electronic devices. Miniaturization may be described as the manufacturing of downsized mechanical, optical, and electronic products and devices.
