The waveguide fiber polarizer is an optical device that utilizes the structure and material properties of the optical waveguide to control the polarization of light. It can convert any input polarized light into the required polarized light output, or decompose the input polarized light into two orthogonal polarized light outputs. There are many types of waveguide fiber polarizers, such as polarization beam splitters based on photonic crystals, silicon ridge nanowires, micro-nano fibers, etc. Waveguide fiber polarizers have the advantages of small size, low loss, wide bandwidth, and easy integration. They are widely used in optical communications, optical sensing, optical computing, optical imaging and other fields.

United States market for Waveguide Fiber Polarizer is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
