A Wavelength Dispersive X-ray Fluorescence (WDXRF) analyzer is a high-precision instrument used for elemental analysis. It separates the characteristic X-rays emitted from a sample based on their wavelengths using crystal diffraction and then detects the intensity of each wavelength with a detector. This allows for accurate qualitative and quantitative analysis of elements. WDXRF offers superior resolution and lower detection limits compared to energy dispersive methods, making it suitable for trace and complex matrix analysis in fields such as metallurgy, cement, petrochemicals, geology, and environmental science.
