A wax-based mold release agent is a type of material used to prevent adhesion of molding compounds or resins to the mold surface during the curing or setting process. Wax-based mold release agents typically contain a blend of natural or synthetic waxes, solvents, and sometimes additives that enhance the release properties or provide other benefits like surface gloss. The primary function of a mold release agent is to create a barrier between the mold surface and the material being molded. This barrier prevents the molded material from sticking to the mold, ensuring easy removal of the finished product without damaging either the mold or the product. In summary, wax-based mold release agents are a popular choice for many molding applications due to their effectiveness, ease of application, and cost-effectiveness. However, it's essential to choose the right type of release agent for the specific molding process and material to ensure optimal results and safety.

The global Wax-based Mold Release Agent market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
