A wax-jet 3D printer is a 3D printing device that uses the principle of jet molding and wax-like materials as printing media. It uses a high-precision nozzle to spray the heated and melted wax material layer by layer and quickly cool and solidify it, gradually building a high-resolution 3D object. This type of equipment has the characteristics of high molding accuracy, smooth surface, and easy later melting. It is widely used in jewelry manufacturing, dental casting, precision industrial prototyping and other fields that require extremely high details and surface quality. It is particularly suitable for rapid production of wax patterns in scenes such as investment casting.
