The weak current system usually consists of multiple information monitoring and communication facilities such as BA, OA, CA and other corresponding systems. The cable tray support for the weak current system is a tray support that meets the wiring layout of the weak current system and the requirements of relevant shielding specifications.

Rapid industrialization and urbanization in emerging countries is driving the demand for cable trays due to the demand for ancillary equipment such as electrical signaling, power and instrumentation control, and communication cables in various industries, as these systems require efficient distribution of power and control cables. Construction and infrastructure development in emerging markets is expanding rapidly, which increases the demand for cable trays. Another major factor driving the growth of the global market is increasing demand for reliable power distribution systems. Cable trays are used to support and protect cables, reducing the risk of damage and power outages. In addition, they provide efficient cable routing, which can reduce installation and maintenance costs. Rising number of renewable energy installations is driving the demand for cable trays. Cable systems can meet this requirement, and cable tray is an important part of it because it provides safety, improves space utilization, is cost-effective, and is flexible in style. Growing demand for cable trays in the construction industry is expected to drive market growth.
