Power relay is a kind of electrical appliance used in the circuit, which can produce jump in one or more electrical output circuits when the input quantity meets some specified conditions. It can act directly on the neutral point directly grounded system, and can be used as the direction element of zero-sequence current protection. Weak power relay: When the open circuit voltage of the contact is DC 28V, the rated load current (resistance) of the contact is 0.5A; 1A relay

According to our research, the global Electronic Components market is approximately USD 466.61 billion in 2022. The Asia-Pacific region is a major market for electronic components. The downstream application fields of the electronic components industry are extensive, including communication equipment, consumer electronics, automotive electronics, smart home, industrial control, military security and other fields. Unlike the strong industry demand in 2021, downstream industry demand in 2022 showed a differentiated trend. The demand for traditional electronic applications represented by mobile phones and computers has turned weak, which has a greater impact on the demand of the entire industry; the demand for communication equipment and data centers has maintained growth but slowed down, and the industrial and Internet of Things driven by digital transformation and the development of artificial intelligence technology. The steady growth of application demand and the accelerated development of the new energy vehicle market can offset the decline in some consumer markets and

provide support for long-term demand growth.
