Weapon night sights provide a major operational edge in the current generation of warfare, meeting the needs of the dismounted soldiers, marksmen, and snipers. These sighting devices can be mounted on a variety of weapons and small arms. They aid in accurate target detection, in poor light conditions, and during nighttime, providing vital information for the execution of military operations. These systems are integrated with the guns carried by armed troops and military vehicles. They provide clearer images and present an effective field of view for dismounted soldiers and vehicles for enemy sighting and combat operations. These weapon night sights are used by military forces across the globe, to execute successful stealth military operations.
