The global Weapons Multiple Carriage and Release Systems market size is predicted to grow from US\$ 245 million in 2025 to US\$ 414 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

A weapons single carriage and release system is a specialized mechanism used in military aircraft or unmanned aerial vehicles (UAVs) to carry and release a single weapon, such as a missile, bomb, or other munition. This system securely holds the weapon during flight and releases it upon command, using mechanical, pneumatic, hydraulic, or pyrotechnic actuation methods. Unlike multi-carriage systems that can deploy multiple ordnance, a single carriage and release system is dedicated to managing one weapon at a time, providing increased control, precision, and often faster response times. These systems are essential for precise targeting and are commonly used in missions where specific, single ordnance deployment is required.

United States market for Weapons Multiple Carriage and Release Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Weapons Multiple Carriage and Release Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
