The global Wear-resistant Parts market size is predicted to grow from US\$ 2208 million in 2025 to US\$ 3272 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Wear-resistant parts refer to key industrial components used under high friction, high impact, or strong abrasion conditions to extend the service life of equipment. They mainly include wear-resistant liners, wear-resistant bushings, wear-resistant teeth, wear-resistant rings, and wear-resistant pipe fittings, and are widely used in mining, metallurgy, cement, power, construction machinery, and port equipment. Their upstream raw materials mainly include high manganese steel, alloy steel, ferrochrome, tungsten carbide, and ceramic composite materials; the midstream consists of wear-resistant material casting, forging, and machining companies; and the downstream mainly supplies mining companies, cement plants, steel plants, power plants, and construction machinery manufacturers. With the increasing intensity of resource extraction, the trend towards larger equipment, and the growing demand for continuous industrial operation, the demand for long-life, high-performance composite wear-resistant parts continues to grow, presenting significant business opportunities in material upgrades, domestic substitution, and customized solutions.

United States market for Wear-resistant Parts is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
