Abstracts

The global Wearable Dry Electrode EEG Device market size is predicted to grow from US\$ 175 million in 2025 to US\$ 525 million in 2032; it is expected to grow at a CAGR of 17.3% from 2026 to 2032.

Wearable EEG devices refer to wearable devices used to monitor brain electrical signals. The readings of these devices can be used for diagnosing neurological disorders and monitoring neurological disorders as well as sleep disorders. The electrodes used for non-invasive brain computer interfaces to obtain electroencephalography are usually divided into two types: dry electrodes and wet electrodes. Dry electrodes are composed of solid conductive materials, including metals, conductive fabrics, and conductive polymers, and can record physiological electrical signals by simply contacting the skin.

Market driver analysis

1. Policy support and medical needs

"Healthy China 2030": China lists brain science as a strategic frontier field and promotes the application of EEG equipment in neurological disease screening.

Medical insurance coverage: Some provinces include EEG monitoring in the scope of medical insurance reimbursement to reduce patient use costs.

Aging: China's population over 60 years old has reached 280 million, and the incidence of neurodegenerative diseases such as Alzheimer's disease and Parkinson's disease has increased, driving the demand for EEG monitoring.

2. Technological progress and cost optimization

Material breakthrough: The application of flexible electronic materials such as graphene and nano silver wires improves the signal quality and durability of dry electrodes.

Algorithm upgrade: Deep learning models (such as CNN and LSTM) realize automatic classification of EEG signals, with a diagnostic accuracy rate of over 90%.

Domestic substitution: ADC chips, filters and other core components are domestically produced, and the equipment cost is 50% lower than that of imported products.

3. Consumer cognition and scenario expansion

Improved health awareness: Consumers pay more attention to stress management and sleep quality, and the penetration rate of EEG equipment in the C-end market exceeds 5%.

Educational needs: EEG feedback training is used to improve children's attention, and the market size grows by 30% annually.

Metaverse fusion: EEG interface is combined with VR/AR to realize mind control of virtual characters, and the game market has great potential.

4. Industry chain collaboration and ecological construction

Upstream integration: Shenzhen Brain Science Technology binds flexible electronics suppliers (such as Royole Technology) and chip manufacturers (such as Huawei HiSilicon) to ensure the stability of the supply chain.

System integration: Hangzhou Boxin Zhilian provides "equipment + cloud platform + AI diagnosis" solutions to achieve remote EEG monitoring and expert consultation.

Data services: EEG data can be sold to pharmaceutical companies and scientific research institutions for new drug development and neuroscience research.

Driven by policy-driven, technological breakthroughs and cost optimization, the wearable dry electrode EEG equipment market is experiencing explosive growth. International giants occupy the high-end market with their technological accumulation

and brand advantages, domestic enterprises seize market share through domestic substitution and scenario innovation, and scientific research institutions promote industrial upgrading through technology transformation. In the future, with the deepening of brain science research and the improvement of consumer health awareness, the market demand for equipment will continue to expand, and technological iteration and industrial chain synergy will become the key to competition.
