Data displayed by most websites can only be viewed using a web browser. They do not offer the functionality to save a copy of this data for personal use. The only option then is to manually copy and paste the data - a very tedious job which can take many hours or sometimes days to complete. Web Scraping is the technique of automating this process, so that instead of manually copying the data from websites, the Web Scraping software will perform the same task within a fraction of the time.

Web scraping (or data extraction) software is used to extract unstructured data from web pages. The data is then converted into a structured format that can be loaded into a database. Examples of unstructured data might be emails or other contact info, reports, URLs, etc.

A web scraping software will automatically load and extract data from multiple pages of websites based on your requirement. It is either custom built for a specific website or is one which can be configured to work with any website. With the click of a button you can easily save the data available in the website to a file in your computer.

Web Scraping Software is mainly classified into the following types: Cloud-Based and On-Premises. Cloud-Based is the most widely used type which takes up about 84.75% of the global market in 2019.

Web Scraping Software is mainly classified into the following applications: Paid Monthly and Paid Annually. And Paid Monthly was the most widely used which took up about 68.87% of the global total in 2019.

HelpSystems, ParseHub, eGrabber, dexti.io, Import.io, etc. are the key suppliers in the Web Scraping Software market. Top 5 took up about 14.47% of the global market in 2019.
