Pulleys are pulley-shaped parts used in various machines and equipment, including automobiles. Normally, a belt is used to transmit power from a power source, such as a machine, and pulleys are used in combination with the belt.

A wedge pulley is used in combination with wedge belts, which are narrow V-belts. Wedge belts create more frictional force than other types of belts of the same width. As a result, they provide greater transmission capacity, enabling high-speed and high-power transmission.

The global Wedge Pulley market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
