Weed membrane ground cover sheets, also known as weed barrier fabric or landscape fabric, are thin, porous sheets typically made of woven polyethylene or polypropylene material. These sheets are designed to be placed on the ground before planting to suppress weed growth, while still allowing air, water, and nutrients to pass through to the soil.

Weed membrane ground cover sheets are commonly used in landscaping and gardening, particularly in areas where weeds are a persistent problem. They can help reduce the need for manual weeding, minimize the use of herbicides, and promote overall plant health by keeping weeds from competing with desired plants for resources. These sheets are typically UV-stabilized and can last for several years before needing to be replaced.
