The weighing type mixing machine is a high-precision blending device based on gravimetric weighing principles. It is primarily used for the automatic weighing, dosing, proportioning, and mixing of various powdered, granular, or liquid materials. The system utilizes load cells to monitor the real-time weight of each component and works in conjunction with a PLC control system or touchscreen interface for formula setting, storage, and automatic operation. It can operate in either batch or continuous modes.Compared to traditional manual or volumetric mixing methods, the weighing type mixing machine offers a dosing accuracy of within ±0.1%, delivering advantages such as precise metering, efficient mixing, traceable data, reduced material waste, and consistent color and formulation ratios. It is ideally suited for automated and lean manufacturing environments and is widely used in injection molding, extrusion, film blowing, and plastic compounding processes.

United States market for Weighing Type Mixing Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
