The Weight Transmitter is an industrial measurement device based on electrical signal conversion and conditioning technologies, designed to transform weak millivolt-level signals (mV/V) from load cells into standardized industrial signals (e.g., 4-20mA, 0-10V, or digital protocols) while performing signal filtering, linearization compensation, and range calibration. It employs high-precision analog-to-digital converters (ADCs) and microcontrollers (MCUs), integrating digital filtering algorithms and piecewise linear interpolation techniques to eliminate sensor nonlinearities and environmental interference (e.g., temperature, electromagnetic noise).

United States market for Weight Transmitter is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
