Digital Piano uses the keyboard as an on-off switch to form an electrical pulse. Once a key is pressed, the internal crystal oscillator starts to work, forming a pulse that generates a waveform of a certain frequency, which is then amplified by a frequency divider and sent to the speaker to produce sound. The entire sound generation process relies on a simple frequency division analog circuit, so the keyboard has no strength and string attack feel, and the sound is relatively mechanical and monotonous.

Digital Piano with Weighted Keys uses a complex resistance device to prevent the keyboard from being too crisp when pressed, and there is some delay when rebounding. The feel is quite close to that of an acoustic piano. According to different people's preferences for keyboard strength, they are divided into semi-weighted and full-

weighted (stepped weight and balanced weight).
