The weighted safety scalpel is a surgical instrument designed to improve safety during surgery. This is a scalpel with a weighted handle that helps reduce the risk of surgical errors by providing surgeons with better control and balance. The weighted safety scalpel is designed with a unique handle that distributes its weight evenly across the entire handle. This weight provides surgeons with a better grip on the scalpel and helps reduce the risk of slipping or losing control during surgery. This improved grip also allows surgeons to make more precise incisions, reducing the risk of accidental cutting

or damage to surrounding tissue. Weighted safety scalpels are commonly used in neurosurgery, orthopedics, and other surgical procedures where accuracy is critical. It is also used in surgery where surgeons must work long hours, as heavier handles help reduce hand fatigue and improve overall comfort.
