A weir monitor is an instrument or system that uses a weir to measure and monitor flow rates in open channels. A weir monitor is a specially shaped barrier (e.g., V-notch, rectangular, or trapezoidal) placed in the flow path. As water flows over the weir, the upstream water level (hydraulic head) is measured and converted into real-time flow data. Weir monitors are widely used in environmental monitoring, wastewater treatment, stormwater management, and hydrological research due to their reliability, simplicity, and low maintenance. They provide continuous and accurate flow measurements in natural streams, drains, and industrial outfalls.In 2024, the global production of weir monitors will reach 196,830 units, with an average selling price of US$362 per unit.

United States market for Weir Monitors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
