The welded centrifugal fan blade is a centrifugal fan blade, which is characterized by fixing the blade and the wheel disc together through a welding process. It is usually made of metal materials, such as steel, stainless steel, etc., with high strength and durability. The working principle of welded centrifugal fan blades is to rotate the wheel disk through the drive of the motor, thereby generating centrifugal force. Centrifugal force pushes the air toward the blades, causing the blades to rotate and pull the air into the center of the blades, where it is then discharged through the outlet. This design allows the welded centrifugal fan blades to produce higher air volume and pressure, making it suitable for applications requiring larger air volume and higher air pressure.
