The global Welding Curtains market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A welding curtain is a protective barrier designed to separate the welding area from non-welding zones, thereby ensuring a safer working environment. Welding generates arc light, which includes harmful ultraviolet and visible light. While welders wear protective face shields to protect their eyes, others in the vicinity or passing by may not have such protection, putting them at risk of exposure to this harmful light. Welding curtains, which effectively block arc light, are used to mitigate this risk.

United States market for Welding Curtains is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
