The global Welding Dust Collector market size is predicted to grow from US\$ 679 million in 2025 to US\$ 947 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

The Welding Dust Collector is a device used to remove welding fumes produced when working with metals used in welding applications.

Welding Dust Collectors must collect extremely small particles to reduce the buildup of airborne pollutants and protect expensive equipment from damage caused by dust settling and clogging delicate mechanisms. Creases present an explosion hazard because dust has a greater surface area and burns faster.
