The global Welding Fire Blankets market size is predicted to grow from US\$ 84.7 million in 2025 to US\$ 105 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Welding fire blankets are personal protective equipment (PPE) that are made of silica yarn, fiberglass, ceramic fiber cloth, or asbestos. These blankets provide protection against welding slag, sparks, spatters, thermal barriers, grinding, heat treating, and molten splashes.

According to the report, one driver in the market is increasing incidents of accidents and health hazards. There are several hazards associated with welding such as fumes, electric shock, and fire explosions, which are potentially dangerous. The welding process involves two processes: pressure welding that uses pressure and heat and fusion welding, which uses heat alone.
