Electric welding fireproof sleeve is a kind of protective equipment used to protect the arms and hands of welders during electric welding operations. It is usually made of refractory materials, which can block high-temperature sparks and splashed metal particles, and reduce the damage of welders to flames and high-temperature molten metal during operation. With the advancement of science and technology, the material technology of fireproof sleeves will continue to improve. Manufacturers may use more advanced refractory materials to improve the fire performance and durability of fire sleeves and increase their service life.
