The global Welding Gun Protective Cover market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A welding gun guard is a safety device used to protect the welding gun and the welder. It is usually made of heat-resistant material and looks like a cover that fits over the welding gun. The welding gun will produce sparks and spatter when working at high temperatures. The welding gun protective cover can effectively prevent sparks, spatter and other hot materials from splashing on the welder, protecting the welder's safety. At the same time, the welding gun protective cover can also prevent welding slag and metal debris from entering the inside of the welding gun, extending the service life of the welding gun. The welding gun protective cover is an indispensable and important safety equipment in welding operations.
