Wet coated sand is a material used to prepare sand cores during the casting process. Compared with dry coated sand, wet coated sand needs to add an appropriate amount of water when preparing the sand core to make the sand material in a moist state. . Wet coated sand is also made of natural sand, binders and other additives, but its characteristic is that when preparing the sand core, the sand and water need to be fully mixed and stirred, and then filled into the core box for molding. Finally, the sand core is solidified by drying or other methods.

The global Wet Coated Sand market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
